Scuttlebutt is *not* federated (like Diaspora or Mastodon). That's a common misunderstanding.

The so-called Pub servers are nothing else than mirror servers. If they fall, nothing is lost in the network. And without any Pubs, you could still communicate via gossip and LANs.

Dear Tech Companies:

I know you knew I was pregnant. It's my fault, I just couldn't resist those Instagram hashtags - #30weekspregnant, #babybump. And, stupid me!, I even clicked once or twice on the maternity-wear ads Facebook served up.

You surely saw my heartfelt thank-you post to all the girl friends who came to my baby shower, and the sister-in-law who flew in from Arizona for said shower tagging me in her photos. You probably saw me googling "holiday dress maternity p Amazon even told you my due date, January 24th, w

But didn't you also see me googling "is this braxton h see the three days of silence, uncommon for a high-f announcement with keywords like "heartbroken" and two-hundred teardrop emoticons from my friends? Is

You see, there are 26,000 stillbirths in the US every y worldwide users; and let me tell you what social med the hospital with the emptiest arms in the world, after pick up your phone for a couple minutes of distractio crushingly, the same as it was when your baby was s Maternity. Latched Mama. Every goddam Etsy tchotc

And when we millions of brokenhearted people helpfully click "I don't want to see this ad," and even answer your "why?" with the cruel-but-true "It's not relevant to me," do you know what your algorithm decides, Tech Companies? It decides you've given birth, assumes a happy result, and deluges you with ads for the best nursing bras [I have cabbage leaves on my breasts because that is the best medical science has to offer to turn your milk off], tricks to get the baby to sleep through the night [I would give anything to hear him cry at all], and the best strollers to grow with your baby [mine will forever be 4 pounds, 1 ounce].

And then, after all that, Experian swoops in with the lowest tracking blow of them all: a spam email encouraging me to "finish registering your baby" (I never "started" but sure) to track his credit throughout the life he will never lead.

Please, Tech Companies, I implore you: If you're smart enough to realize that I'm pregnant, that I've given birth, then surely you're smart enough to realize that my baby died, and can advertise to me accordingly, or maybe just maybe, not at all.

Regards,
Gillian

Whitepaper RIA

Le futur des interfaces web

[Introduction | Objectif | Contenu | Téléchargement]

Introduction

Après une période de règne sans partage, les applications web de première génération montrent aujourd'hui leurs contraintes et leurs limites. Sous la pression des utilisateurs, demandant à retrouver les fonctionnalités et la flexibilité de leurs « anciens » clients lourds, l'heure du Web 2.0 est venue en entraînant avec lui l'apparition d'interfaces de nouvelle génération dites RIA (Rich Internet Application).

Deux familles d'interfaces RIA s'affrontent aujourd'hui : d'un côté HTML et son cortège de technologies permettant la "dynamisation" de son contenu au sein du navigateur web, de l'autre côté les technologies permettant la génération à la volée de flux destinés à alimenter des applications riches de type Flash ou XAML.

Le large choix des solutions proposées et le manque d'émergence [illegible] l'une d'entre elles, rendent aujourd'hui difficile le choix d'une plate forme RIA.

The web is uder attack with anti-encryption and anti net-neutrality legislations. This will affect my capabilities to use the web the way I wish. But it's not at the same level then platforms,

I share that is quite fustrating to have such good alternatives but just not the money/exposure to inform people about it. The mass adoption spiral is nearly impossible to start. But agan, it's not like I had something to sell to those people. So why would I but energy. Maybe living with this fustration is a fatality.

Merkle Trees for SSB Feeds

Or: Enabling partially subscribable feeds, but with a lot of words before I get to that point.

Like offchain content, this is another idea that has been floating through the scuttleverse at various points in time. A compact summary that is only useful if you already know what this is about: By changing the metadata of ssb messages, we could create merkle trees rather than linked lists. This allows verifying the `k`-th message of a feed by traversing only `log(k)` many messages, rather than the full `k` messages of the linked list in the current model.

This is an issue that

- touches the very core of the protocol
- seems to be both rather abstract and hammering on pointless detail at first
- but turns out to have far-reaching consequences

This post will at times be very technical and somewhat computer-sciency, but I'll try to explain enough that anybody interested can follow the gist of it. It's also a pretty long read, but I hope a few of you can still take the time to read it. Some of it my look complicated at first, but once you gain some intuition, it all becomes manageable. It's definitely not too complicated for real-world use - dat uses a data structure like this

Insights into the formation of other scuttleverse islands
#scuttlebutt #graphviz #socialgraph
@bobhaugen successfully nerd-sniped me into investigating the social graph and checking whether we have early evidences of other scuttleverse "islands" out there. I navigated through the graph in Gephi, had some fun, and discovered some things. I'll focus on islands that have "bridges", because through the social graph alone we obviously cannot find completely separate scuttlebutt users (islands without bridges).

👋
Back on the Scuttleverse... catching up on the gossip and realize how much I prefer this medium to others.
FWIW I dropped off because I needed to recover my keys from a faulty hard drive and ended up going on holiday instead. Now I'm in "thinking mode" while I'm hatching my next plans, so reading widely among my network. Especially enjoying all the #solarpunk conversations on here.
Oh, and I start a new freelance coding gig tomorrow, for the Freedom of the Press Association (but that's not all I'm up to, some good personal project things coming soon).
Hurrah!

- 🦋 = uses ssb-pub
- ✨ = uses easy-ssb-pub
- 🌐 = pub has a page where anyone can get freely request a fresh invitation
- 🔢 = pub has a public invite listed on this page

Otherwise you'll need to message the pub-owners for an invite, if one is not listed here.

Public pubs

For 🌐 pubs, you will need to visit the pub's page to get an invite code. (The codes here are the pub's address within SSB, not invite codes.)

For 🔢 pubs, you can copy and paste the invite code right from here.

Please don't just choose the first pub in the list!

In order to spread out the load of new users and not overwhelm any volunteer's pub server, select one further down the list or at random.

The web is uder attack with anti-encryption and anti net-neutrality legislations. This will affect my capabilities to use the web the way I wish. But it's not at the same level then platforms,

I share that is quite fustrating to have such good alternatives but just not the money/exposure to inform people about it. The mass adoption spiral is nearly impossible to start. But agan, it's not like I had something to sell to those people. So why would I but energy. Maybe living with this fustration is a fatality.

Road to solar ☀️

Part II - Really going off-grid

It's been two weeks since I've been using my solar setup. Sadly I haven't been able to go fully off-grid yet, and am still relying on my hotwire power supply for things like power machines and the computers. At night my cheap 400W hasn't

Vous partagez 1 ami mutuel avec cette personne.

If you want to contact me on a different channel, see my pub key ledger.

If you like techno music, I sometimes share releases I like here and you can find set recordings here. If you want to surprise me, I regularly update my bandcamp wishlist.

I also hack on a lot of stuff. #golang if I can but try to be more pragmatic these days.

Also working on tale:net (on github).

- Here is it's initial mission statement: %q6Im24T...
- find some history on #talenet and our blog
