### Haftanın seçkin maddesi

**Mars**, Güneş Sistemi'nin Güneş'ten itibaren dördüncü gezegeni. Roma mitolojisindeki savaş tanrısı Mars'a ithafen adlandırılmıştır. Yüzeyindeki yaygın demir oksitten dolayı kızılımsı bir görünüme sahip olduğu için *Kızıl Gezegen* de denir. İnce bir atmosferi olan Mars gerek Ay'daki gibi meteor kraterlerini, gerekse Dünya'daki

gibi volkan, vadi, çöl ve kutup bölgelerini içeren çehresiyle bir yerbenzeri gezegendir. Ayrıca dönme periyodu ve mevsim dönemleri Dünya'ninkine çok benzer.

<https://ipfs.io/ipfs/QmT5NvUtoM5nWFfrQdVrFtvGfKFmG7AHE8P34isapyhCxX/wiki/Anasayfa.html>

Güneş Sistemi'nde bilinen en yüksek dağ ve *Mariyeris Vadisi* adlı kanyon en büyük kanyondur. Ayrıca Haziran 2008'de *Nature* dergisinde yayımlanan üç makalede

# Trump Just Deleted Obama's Climate Change Webpages

By *Brian Kahn*

Follow @blkahn

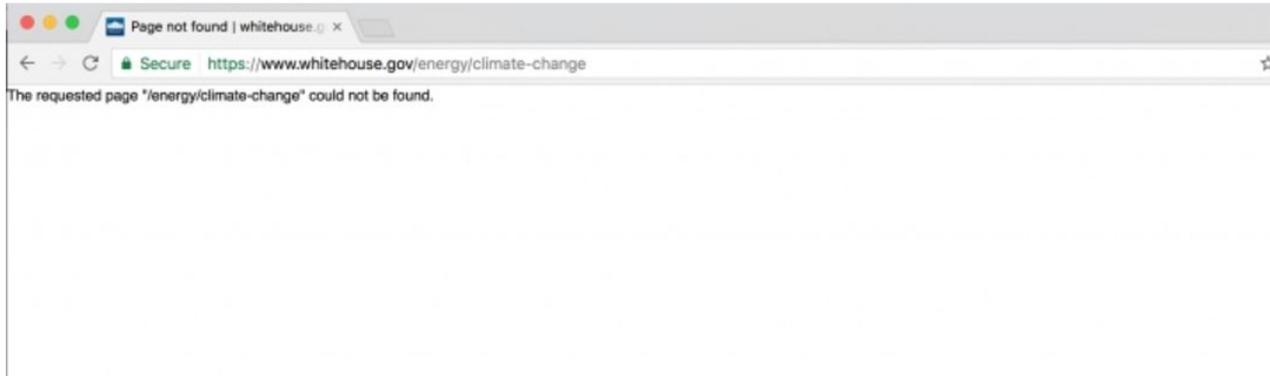

9,117 followers

Published: January 20th, 2017

At the exact hour when the presidency transferred hands, the Obama administration's climate and energy webpages became some of the first casualties of the new Trump administration.

In their place is an “[America first](#)” [energy plan](#), which talks at length about tapping fossil fuel resources in the U.S. but makes no mention of climate change or renewable energy. Investing in the latter will be crucial to avert catastrophic changes to the world.

<http://www.climatecentral.org/news/trump-delete-climate-change-webpage-21091>

*Obama's climate page has been sent off to the archive.*

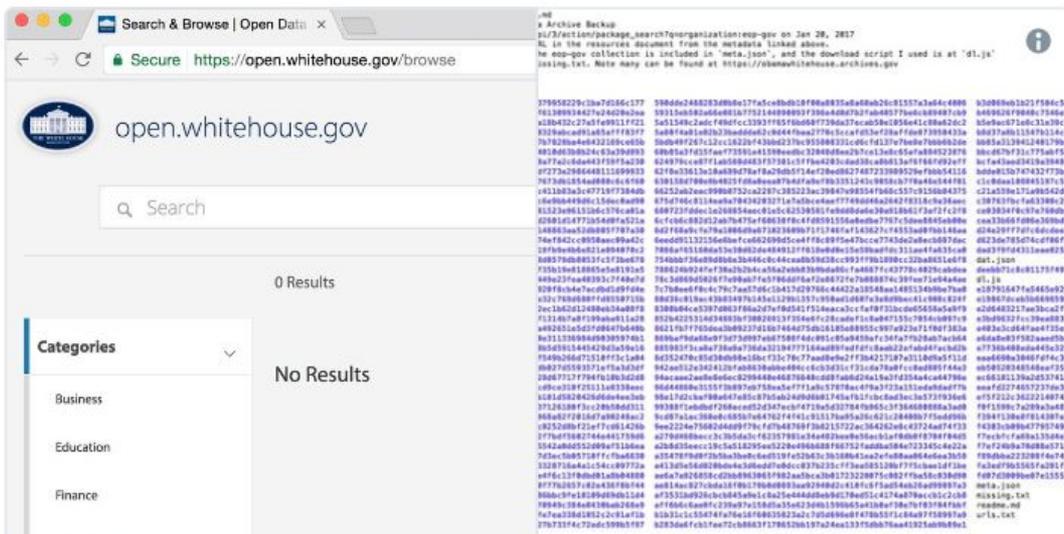

## Building refuge for federal climate & environmental data

DataRefuge helps to build refuge for federal data and supports climate and environmental research and advocacy. We are committed to fact-based arguments. DataRefuge preserves the facts we need at a time of ongoing climate change.

This site is one part of the project. The vast majority of the government information gathered through this project is available from the Internet Archive through the [End of Term project](#). This data catalog is a place to store data that is difficult or impossible to harvest through web crawlers. Data was added to this site by volunteers at [Data Rescue events](#). You can see the [workflow](#) used at many of these events on the Data Refuge project site, however this workflow is no longer supported.

**Synopsis :**

Odile Deray, attach e de presse, vient au Festival de Cannes pour pr senter le film "Red is Dead". Malheureusement, celui-ci est d'une telle faiblesse que personne ne souhaite en faire l' cho. Mais lorsque les projectionnistes du long-m trage en question meurent chacun leur tour dans d' tranges circonstances, "Red is dead" b n ficie d'une incroyable publicit . Serge Karamazov est alors charg  de prot ger le nouveau projectionniste du film...

## True data ownership

Users should have the freedom to choose where their data resides and who is allowed to access it. By decoupling content from the application itself, users are now able to do so.

## Modular design

Because applications are decoupled from the data they produce, users will be able to avoid vendor lock-in, seamlessly switching between apps and personal data storage servers, without losing any data or social connections.

## Reusing existing data

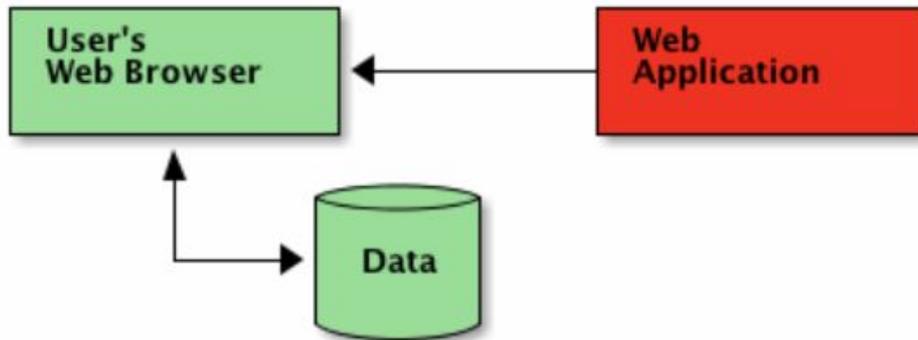

Developers will be able to easily innovate by creating new apps or improving current apps, all while reusing existing data that was created by other apps.

## New release 0.2.0

I'm really happy to announce that I finally learned how to version <sup>[1]</sup>! Also there are a lot of new features!

### Footnotes

As you might noticed one of the new features is being able to add footnotes <sup>[2]</sup>. Footnotes can be inlined or manually referenced.

```
This is how you manually[^manual] reference something[^1].
```

```
This is how you add inline^[You don't need to specify inlined notes  
at the end of the file.] notes.
```

```
...
```

```
// In the end of the file...
```

```
[^1]: This is a footnote
```

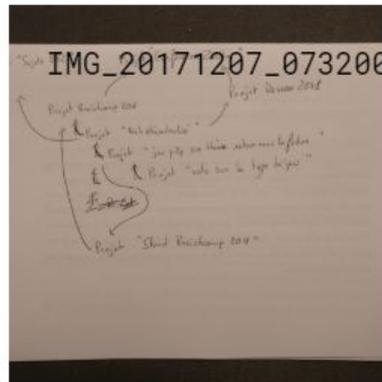

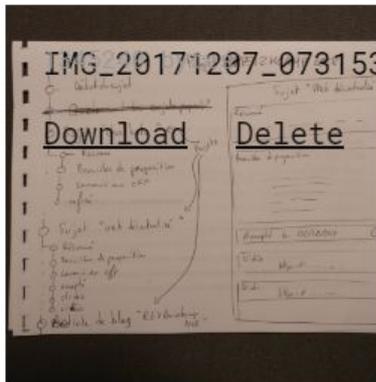

```
[^manual]: manually referenced
```

No need to fret that you're missing frets. Fritter now tells you (once again) when there are new frets.

Paul Frazee · 4d ago

Fritter update was published. You shouldn't need to be afraid to click on links anymore.

Paul Frazee · 4d ago

Doing some work on Fritter today, fixing some of the annoying things like the issue clicking on links and the lack of "new posts" notification. Also going to look at Sander's mentions PR (finally!). Also using this to QA our 0.8 fork & edit flows... which needs a little work but it's working ok so far.

Paul Frazee · 4d ago

Replying to this post

Cool idea! I'm certain people will find that interesting and worth talking about.

# Mozilla Add-ons Blog

<https://blog.mozilla.org/addons/2018/01/26/extensions-firefox-59/>

## Extensions in Firefox 59

### Support for Decentralization Protocols

Mozilla has always been a [proponent of decentralization](#), recognizing that it is a key ingredient of a healthy Internet. Starting with Firefox 59, several protocols that support decentralized architectures are approved for use by extensions. The newly approved protocols are:

- [Dat Project](#) (dat://)
- [IPFS](#) (dweb:// ipfs:// ipns://)
- [Secure Scuttlebutt](#) (ssb://)

Firefox itself does not implement these protocols, but having them on the approved list means the browser recognizes them as valid protocols and extensions are free to provide implementations.

## L'État adopte sa propre messagerie instantanée sécurisée

D'ici l'été 2018, l'État disposera de sa propre messagerie instantanée, alternative aux applications WhatsApp et Telegram.

Elle garantira des **échanges sécurisés**, chiffrés de bout en bout, sans dégradation de l'expérience utilisateur. Elle sera compatible avec n'importe quel terminal mobile ou poste de travail, d'État ou personnel. En effet jusqu'à maintenant l'installation des applications comme WhatsApp ou Telegram n'était pas possible sur les téléphones mobiles professionnels ce qui ne permettait pas une fluidité parfaite de l'information et des partages de documents.

Piloté par la **direction interministérielle du numérique et du système d'information et de communication de l'État (DINSIC)**, le projet reçoit les contributions de l'**Agence nationale de la sécurité des systèmes d'information (ANSSI)**, des DSI du **ministère des Armées** et du **ministère de l'Europe et des affaires étrangères**.

L'outil développé s'appuie sur un **logiciel open source** (Riot) qui implémente un **standard ouvert** (Matrix). Porté par une startup Franco-Britannique (New Vector), et bénéficiant de nombreuses contributions, ce standard d'échanges de messages instantanés a déjà retenu l'attention d'autres États tels que les **Pays-Bas** et le **Canada**, avec qui la DINSIC collabore étroitement.

## Introducing the Dweb

The web is the most successful programming platform in history, resulting in the largest open and accessible collection of human knowledge ever created. So yeah, it's pretty great. But there are a set of common problems that the web is *not* able to address.
